LEVEL LOGGING

The New WL15 Model Water Level Logger

Contact
Global Water
for all your
instrumentation
needs:

Water Level
Water Flow
Water Samplers
Water Quality
Weather
Remote Monitoring
Control

The WL15 provides a datalogger and pressure sensor for remote monitoring and recording of **water level, flow, and pressure data.**

- **Highly Reliable and Accurate.** This water level logger records *24,000* readings with programmable time intervals.
- **Several Water Level Ranges Available.** Optional cable lengths up to 500'.
- **Housed in a Weather-Resistant Cylindrical Enclosure.** The WL15 slips inside a 2" pipe and the internal 9 volt battery powers the logger and sensor for up to three years.
- **Includes Windows-Based Software.** Allows easy upload of data to standard spreadsheet programs on a PC computer.

BASIN MANAGEMENT CASE STUDIES: TOOLS, TECHNIQUES, AND METHODS FOR MANAGING RIVER BASINS

Guest Associate Editor • Gerald Sehlke
gse@inel.gov

This issue of *Water Resources IMPACT* looks at five river basins in the western United States to gain insights into some unique tools, methods, and approaches that have been adapted to address a particular set of river basin management challenges that are being faced in each basin. These case studies provide a great diversity of insights and ideas that may be modified and implemented in other basins.

OVERVIEW

- 3 Basin Management Case Studies: An Overview of Selected Tools, Techniques, and Methods for Managing River Basins**
Gerald Sehlke (gse@inel.gov)

FEATURE ARTICLES

- 5 Technical Tools to Aid in Conjunctive Management of Surface and Ground Water in the Snake River Basin**
Donna M. Cosgrove (cosgrove@if.uidaho.edu)
Gary S. Johnson
In order to conjunctively manage surface and ground water resources we must be able to understanding the cause and effect relationships between ground water pumping (or recharge) and depletion (or accretion) of rivers, springs, and lakes. Tools and techniques have been developed to visualize and simplify interpretation of ground water modeling results to assist in the practical application of modeling to conjunctive management of water resources in the Upper Snake River Basin in Idaho.
- 10 The Glen Canyon Dam Adaptive Management Program**
Michael J. Liszewski (mjliszew@usgs.gov)
The Glen Canyon Adaptive Management Program measures the hydrological and ecological effects of Glen Canyon Dam operations on the resources associated with Lake Powell and the Colorado River from Glen Canyon Dam to Lake Mead. This paper provides an overview of the scientific program structure and processes and discusses some of the opportunities for utilizing an adaptive management approach in studying a large river basin.
- 14 The Rio Grande/Rio Bravo – A River of Change**
Vincent C. Tidwell (vctidwe@sandia.gov)
Ari M. Michelsen, Javier Aparicio, and Howard D. Passell
The Rio Grande/Rio Bravo has played a long and important role in the development of the Southwestern United States and Northern Mexico; however, with development has come significant change to the river. Here we give a brief survey of the changing complexion of the Rio Grande, the programs aimed at understanding this change, and efforts to efficiently manage this change.
- 18 Impacts of Managing Water in a Closed Basin: The Walker River Basin Case Study**
John C. Tracy (tracy@dri.edu)
Balancing environmental concerns with water use in closed basins in the Western United States has become the latest challenge for water resource managers. To meet this challenge, new water management strategies must be employed that focus on reducing the consumptive use of water instead of retiming its delivery.
- 22 A New Approach to Integrating a Superfund 'Megasite' Cleanup Into Management of the Coeur d'Alene River Basin**
Kathryn Johnson (kjohnson@johnsonenviro.com)
Roger Mayes and Paul Wichlacz
The state of Idaho created the Coeur d'Alene Basin Environmental Improvement Project Commission as a new approach to guide the cleanup of a complex EPA Superfund effort within the Coeur d'Alene Basin. Though it is still in its formative stages, the Commission represents a new model for managing a complex cleanup and incorporating broad stakeholder concerns on the basin scale.
